AI-native systems builder with **9+ years** delivering production platforms at scale. Specialise in autonomous SDLC agents, LLM orchestration, RAG pipelines, distributed backends, and enterprise data engineering. Built and led **MinionBot** — a full-SDLC AI agent (Jira → PRs) — and a **50K-document RAG assistant** at Zinnia. Scaled engineering teams from 8 to 30+ and migrated **400M+ records** in high-throughput pipelines.

OPEN SOURCE & PROJECTS

X Tweet Helper

Next.js · TypeScript

Self-hosted X growth workspace — AI tweet studio, scheduling, analytics.

github.com/atulmishra1996/x-tweet-helper →

Personal Life Dashboard

React · Side project

Productivity dashboard for tracking personal life metrics and goals.

github.com/atulmishra1996/personal-life-dashboard →

EDUCATION

B.Tech — Computer Science

Lovely Professional University

2014 – 2018 · GPA 7.2

President, CYPHER Coding Club

EXPERIENCE

Senior Software Engineer · Tech Lead

Sep 2024 – Present

Zinnia · Bengaluru, India (On-site)

- Led **MinionBot** — a full-SDLC AI agent that autonomously converts Jira/Confluence tickets into design documents, multi-repo code changes, and production-ready GitHub PRs with human-in-the-loop governance and streaming workflows.
- Architected **6 independently deployable AI microservices**: Tree-sitter codebase indexing, Neo4j knowledge graphs, unified planning pipelines, sandbox validation, and LLM-powered code execution on Kubernetes with Azure AD auth.
- Co-designed and co-authored **Mosaic AI** — an intelligent architecture copilot that turns Zinnia's complex distributed platform into a queryable, evidence-backed knowledge graph. Published on LinkedIn Pulse (63 reactions).
- Built high-throughput enterprise migration platform moving **400M+ records** from MSSQL to MongoDB — multi-threaded, fault-tolerant, horizontally scalable. Now the standard for all enterprise data transitions at Zinnia.
- Delivered **RAG-based operational assistant** over 50,000+ documents using MMR retrieval, ColBERT re-ranking, and multi-query decomposition — significantly reduced ops support escalation rate.
- Migrated legacy Camunda workflows to a custom Java orchestration service, improving throughput and reliability under sustained high load.

Engineering Lead

Aug 2023 – Aug 2024

xalts · Bangalore, India

- Joined as **first backend engineer**; grew scope to own backend, frontend, DevOps, and QA for the CDA no-code financial platform.
- Scaled team from 8 to 30+ engineers** — led end-to-end hiring across backend, frontend, DevOps, and QA disciplines.
- Designed distributed systems from scratch: webhook triggers, schedulers, token managers, and indexers supporting institutional financial workflows.
- Optimised critical CDA execution DB calls by **~70%**; built deployment pipelines on AWS and GCP.

ACHIEVEMENTS

- 🏆 Google Code Jam 2017 — Qualification Round
- 🏆 CodeChef SnackDown Pre-Elimination (2016 & 2017)
- 🏆 1st Place — Code Samurai & Code Manthon, LPU

EXPERIENCE (CONTINUED)

Senior Software Engineer

Jul 2022 — Apr 2023

Simpl · Bangalore, India

- Shipped Banner Service end-to-end in Java/Spring Boot — served personalised promotions at scale.
- Integrated WordPress e-commerce checkout with Simpl's payment flow via Python/FastAPI.
- Reduced consumer lag in Kafka-based event and message management pipelines.

Java Spring Boot Python FastAPI Kafka

Senior Software Developer

Aug 2021 — Jul 2022

Jisr HR · Remote

- Built **Performance Management service** from scratch — goals, OKR tracking, and employee review cycles.
- Collaborated with Payroll team to optimise HR Attendance API performance.

Ruby on Rails Java Kafka AWS

Software Development Engineer

Sep 2019 — Aug 2021

Zynga · Bengaluru, India

- Developed **Tropical Escape** game features and optimised orderboard crafting system.
- Shipped **Collection Event** mini-game — measurably improved player engagement and retention metrics.

C# .NET Unity Python

Software Development Engineer

Jul 2018 — Aug 2019

Disney+ Hotstar · Mumbai, India

- iOS social pod: integrated AsyncDisplayKit, replacing Auto Layout for improved scroll performance.
- Built leaderboard, scorecard, and voting/polling for **IPL & Bigg Boss** live events at tens-of-millions-user scale.

Swift Objective-C RxSwift AWS

Software Engineer Intern

Aug 2017 — Jun 2018

ClearTax · Bengaluru, India

- Built **Autopivot** (Ruby on Rails) integrated with Pivotal Tracker for automated sprint tracking.
- Python scraper for monitoring government websites with automated change notifications.
